DESIGN CHALLENGE QUESTIONS:

1. Tell us about the information you're visualizing.

What data are you presenting? What is the story you are trying to tell about this data? Why is this information important to share? Who is affected by this information and how does it affect them? (50 words or less)

The data that I'm presenting is the number of food that is being wasted around my community but also drawing that up to see how much food that is being wasted from the entire United States country, then seeing how much the world is wasting. 2 years ago, I joined a non-profit orchestra and every concert typically they'd do a lot of food fundraising to give out any food to those who are in need. So I was curious about why specifically North Shore Orchestra decided to do a food fundraiser and the biggest reason was because of food wasting. So that got me thinking that maybe asking my school about this as well and I was also told by my health teacher that our school is wasting such food. So clearly saw that food wasting is a serious problem and showing these numbers could surprise a lot of people. The reason why this information is important to share is because other countries whose governments are corrupted and poor don't have enough money to buy any food and instead live off drinking water only. If we as a community can stop wasting food, it can save so many people's lives and it also saves so much money as well. The people who are affected by this information are the ones that are wasting food, the way they are affected from this data is showing them the reality of how bad it is wasting food.

2. Tell us about your data.

Where did you find the information that you're visualizing? List your source(s) and include a link if you found the data online. If you collected the data yourself, let us know how you gathered it. (50 words or less)

3. Tell us about your design.

Describe your design, its key symbols, and how users can understand the data you are presenting. (50 words or less)

My design is about how big food wasting is a massive impact starting from a small community to another and basically starting from a small to a large circle will show how crazy not only visually but how crazy the numbers are. But also just challenging others to think about visually how their communities feel as well about food wasting. My goal with this project is to challenge others to stop wasting food and track themselves to see if they can save enough food for the world.

4. Tell us about the impact of your design for your user(s).

Describe how and why your design would benefit your audience and community. Might this have an impact on others in your broader community, across the country, or even around the world? How will users access and experience your design? (50 words or less)

This will allow the audience to have second thoughts and question a lot of things of how they can stop wasting food and help their community around others.
